Varioflag® A (perforation structure) and Primeflag

Front

Back

All sizes are approximate. As we are constantly developing our products we reserve the right of changing technical issues and dimensional deviations.

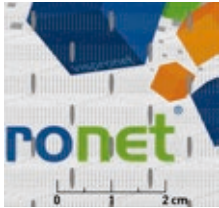

Buying flags is a matter of trust – trust in quality!

All flags are not equal. When used outdoors flags are exposed to extreme weather and environmental conditions and this is when our true quality of our flag fabrics and printing is revealed.

We offer you a choice of 4 different flag qualities:

From our standard fabric through to “extra strong” they all exceed the type of durability found in today’s marketplace. All our flags have one thing in common:

They are printed using our state-of-the-art printing equipment which offer unprecedented high resolution image reproduction on both sides without the loss of colour or lightfastness. The printed image is up to 100 percent mirrored and visible on the back.

	Multiflag® Standard	Varioflag® A Seamless	Primeflag Strong
			
Fabric thickness	approx. 110 g/m ²	approx. 110 g/m ²	approx. 155 g/m ²

Supraflag®
Extra Strong

approx. 155 g/m²

100% woven polyester

matt

highest available durability compared to standard polyester

hemmed

screen and digital printing

print image 100% visibility

lightfastness 6-7

highest colour brilliance

washable, quick drying

Even more protection for your flags:

The flag corners are the most exposed to the weather conditions. For protection, we also offer other finish options such as rounded corners. Alternatively, you can also order flags with anti-fray netting or additional corner reinforcements. If you need further assistance or have any questions do not hesitate to contact us.

Note:

For extended durability we recommend the removal of the flags during stormy weather conditions.
